

REMARKS

This paper provides an amendment accompanying a request for continued examination. This paper follows a final Office action rejecting all the claims of the application, i.e. claims 1-20, and also follows a telephone conversation with the Examiner and the Examiner's supervisor on 18 July 2007. With this paper, various of the claims are amended and some are canceled, so that only claims 1 and 2-19 remain pending.

During the telephone interview applicant's attorney was advised that incorporating into the main claims the use of sensors disposed on opposite sides of the receptacle for detecting a rotational force would be sufficient to distinguish from the art of record, but would require a further search. The amendment provided by this paper is believed to incorporate the limitations suggested by the Examiner and his supervisor.

Accordingly, applicant requests that all rejections of record be withdrawn. Passage to issue is earnestly solicited.

Respectfully submitted,

July 26, 2007
